

Spring Bingo

Spring announces its arrival with new leaves and bright blooms. Look out from your window or take a walk around your neighbourhood.

Find any 3 down or across and say Bingo!

Use the extra space in each box to make a note of the date, time of day, place where you made these observations.

My Observations

Something new I am noticing this season:

Something that I can no longer spot:

Find out about festivals, foods, songs or stories that celebrate spring:

new leaves

flowering tree

leaves with marks, holes, patterns

flowers used to make natural colours

leaves you can cook or eat

spiderlings

birdsong

3 different shades of green

bird, insect or mammal on a fruiting tree

Activity: Leaf Designer(s)

Have you noticed leaves that have strange marks, patterns or holes? How do you think these come about?

Some insects like the leaf-cutter bee make semicircular or crescent moon shaped cuts on the sides of a leaf. The bees use the cut pieces of the leaves to build their nest.

Draw, write or take pictures of leaves that have different marks and patterns on them. For each, try to guess who created the mark/pattern.
