

Patterns in Nature

You can find many different shapes and patterns in the natural world- let's go looking for interesting shapes and patterns on leaves, tree barks, flowers and insects!

- Go for a walk near your home or school. Look for lines, dots, spirals and branching in nature.
- Draw and write about things you see against each pattern in the activity sheet. Mention what you saw and where you saw it.
- You can collect fallen leaves, seeds or flowers and create a display to show your friends and family. If possible, take a picture to share it with others.
